

Senior Lab Technician

Microbiology & Analysis

Do you thrive on implementing complex & diverse laboratory projects?

In this job, you will:

Be meticulous in the implementation of routine manipulations, but you will utilise a wide variety of lab techniques and will cover various facets of the project

Manage the equipment and instrumentation

Grow your understanding of microbiology and analytical work

Work with like-minded people, balancing hard work and enjoyment

Does this speak to you? If so, send us your CV, tell us why you think there is a fit, and let us talk.

Cryptobiotix was founded in 2021 with the aim of challenging the status quo, both in technology and in the way we do business. As a **preclinical CRO**, we provide laboratory services to companies that develop **novel treatments to improve human & animal health**, by targeting the **gastrointestinal tract** and **particularly the gut microbiome**. Our proprietary **SIFR® technology**, developed and validated in 2021, has multiple **unique features** relating to both **throughput** and **biorelevance**. As a business, we value **strong, trustworthy relations** with our stakeholders. **Transparency and authenticity** are at the core of our involvement in our employees' well-being and career path, in our customers' research programs and questions, and in our suppliers' market approach.

Position summary

We are looking for a **senior lab technician** to strengthen our operations. Your key responsibility will be to expertly **perform optimised protocols** for our core activity. Your experience and desire to learn, make you able to **identify issues** and **come up with solutions** or frame a path to it together with your colleagues.

We are looking for a person with **at least 5 years of demonstrated industry experience** to implement routine and non-routine analyses and experiments with a high amount of **autonomy**. We are open-minded and we value each other's inputs to tackle various challenges in synergistic ways. We also want to **support you in your career path** and understand how we can have you on board for the long run. As a start-up, and we approach this **individually** for each employee.

Experience and education requirements

- **Bachelor, or Master of Science with minimum 5 years of industrial lab experience** in nutrition, biological or chemical sciences in relevant fields
- Laboratory experience
 - o Focused mindset, able to repeat manipulations with **precision**
 - o Likes to **understand** the **reasoning** behind a specific implementation and to think along
- **English** proficiency, Dutch is a plus
- Additional preference:
 - o Prior lab experience in microbiology or gastrointestinal research
 - o Bioinformatics experience in R software
 - o Ability to adapt to different depths of technological discussions depending on interaction partners
 - o Experience working in an international and multi-cultural environment

Package

We offer a **competitive package**, matching your fit for the position and experience.

The yearly gross salary range for this position is **45k€-60 k€**, based on experience. Additional benefits include meal vouchers, premium insurance package, phone contract.

Position available from April 2024 onwards.
